Dexter + Chaney’s New Data Exchange Application Streamlines Business Processes and Data Management

Company will exhibit Spectrum Data Exchange booth #1167

Seattle: Construction software provider Dexter + Chaney (www.dexterchaney.com) will exhibit the new Spectrum Data Exchange (SDX)—a secure, quick and easy way to transfer data into the company’s Spectrum construction management software—at the NECA Show Sept. 29-Oct. 2 at the Mandalay Bay Convention Center in Las Vegas (booth #1167). SDX takes advantage of the web services that are available with the latest cloud-based release (version 14) of Spectrum® Construction Software.

With SDX, Dexter + Chaney clients can automate the import of data from multiple sources, including other applications. SDX dramatically reduces the amount of time-consuming, repetitive data entry that is associated with many tasks such as time entry, invoice processing and inventory management. "Our goal with Spectrum is to make it the most accessible and easiest-to-use construction software available," said John Chaney, Dexter + Chaney president and co-founder. "After investing in the research and development necessary to transform Spectrum into a true web-based product, SDX was the next logical step."

SDX provides templates, tools, and a Microsoft Office® Add-In for Spectrum version 14 (Spectrum Office Add-In) to help you import data directly from Microsoft Excel®. Users benefit from integrated data error checking, which automatically alerts you to formatting or entry mistakes when they occur.

SDX provides a library of user-friendly templates that contractors can use as-is or modify to bring information into Spectrum from other sources, including other software applications. SDX comes with a Microsoft Excel® add-in that lets the user connect to Spectrum directly from an Excel spreadsheet. "Every contractor we know uses at least several software applications to run their business," said Geoff Falk, Spectrum product manager. "SDX will let them integrate their spreadsheets and applications onto a single platform without the time and money usually associated with software integration."

About the NECA Show
The NECA Show is the premier annual expo for the electrical construction, power and cabling industry where electrical professionals can view the latest innovations in tools, system controls, software and vehicles plus learn about the business services their
companies rely on. For more information on the 2012 NECA Show visit www.necaconvention.org, or contact Katie Nolan at NECA, katie@necanet.org, 301-215-4506. View the full NECA Show Expo Map at www.necaconvention.org/show.
