## ConEst Announces Latest Release of JobTrac<sup>™</sup> Project Management Software

**MANCHESTER, NH – (August 4, 2009)** ConEst Software Systems, an acclaimed technology innovator of estimating, design build, project management and billing software for the electrical, low voltage and structured cabling industries, today announced the latest product release of **JobTrac**, its project management software solution. The most recent release of **JobTrac**, *Version 4*, reflects ConEst's continual efforts to make the complete project management experience as intuitive as possible for end users, driving the transparency that construction contractors need to make the most of every dollar.

**JobTrac** is part of ConEst's **PowerSuite** of estimating and construction management software. The **JobTrac** system provides construction project managers with the tools needed for much greater efficiency in managing day-to-day project operations; from tracking project submittals, change orders and material purchase orders, to scheduling labor and project payment applications. Transmittals, emails, phone conversations, daily work reports, time cards and even incident reports are all logged within the project. Material requisitions and purchase orders can be managed by task. A built-in Gantt chart is used to establish start/finish dates as well as assign dependencies and constraints for all the project tasks. As the project proceeds, **JobTrac** will track and compare the budgeted estimate costs versus actual costs. And with any project comes billing; **JobTrac** will produce a schedule of values that is used for payment application and automatically generates a payment application based upon the percentage of progress at that time. Customers can also use the free ConEst FTP site to transmit their submittals and large files.

"Our latest product release is noteworthy for improving upon what is already considered one of the top construction project management systems available on the market," said George Hague, president of ConEst. "Our customer-focused development process is reflected in this release with enhancements that address the entire project management process. The new release includes a new operating platform and updated user interface, along with expanded functionality for all construction trades."

Major enhancements in the latest product release of ConEst **JobTrac** include:

- **.NET Platform** - By leveraging .NET, ConEst has moved the competitive bar even higher in deployment and serviceability, reliability, performance, and data security.
- **SQL Database** – SQL is the gold standard for managing data on personal computers, minicomputers, and mainframes. The complex elements of construction projects demand the performance of this powerful database.
- **Superior Functionality** – Complete construction project management capabilities, including purchasing, labor and inventory management.

Availability: **JobTrac**, *Version 4*, is available now. Please contact ConEst directly for pricing information and additional product detail. You may also contact ConEst sales via email at [sales@conest.com](mailto:sales@conest.com)

### About ConEst Software Systems:

ConEst Software Systems is a privately held corporation headquartered in Manchester, New Hampshire serving customers worldwide since 1989. ConEst is the leading provider of a fully integrated suite of construction software solutions for estimating, design build, project management and billing software to the electrical, data cabling and low voltage contractor markets. ConEst products incorporate technology and user-friendly, timesaving features that enable their customers to manage the entire construction process from design and bid through project management and final billing to meet the demands of today's specialty construction industry.
